

Download an interactive demo on the Hammar H20

Hammar H20 Hydrostatic Release unit comes in one size only - economy size!

The Hammar H20 may be small in size, but has big advantages over many of its larger competitors, not least better economy!

The Hammar H20 is a hydrostatic release unit that fits liferafts of all shapes and sizes. It's made of glassfibre reinforced nylon, which means that it won't rust. The Hammar H20 needs no annual service, maintenance or spare parts. You simply install a new one every two years and dispose of the old one. Keeping the environment in mind, the old unit is 97% recyclable.

Simple handling procedures mean that storage costs are also kept down to a minimum. With the H20, installation is both easier and quicker, greatly reducing your customers' downtime ashore.

Compared with conventional release units, the Hammar H20 offers savings of up to 50% over a 10 year period. The Hammar H20 is now the biggest selling hydrostatic release unit in the world. Its safe, reliable and simple design has earned it more world-wide approvals than any other unit. In fact, it's a small

wonder!

So if you want to make a sizeable difference to your economy insist on installing the Hammar H20, the small release unit that gives you the big deal.

White strong rope of Hammar H20 secured to deck or liferaftcradle and attached to liferaft lashing with a sliphook. Liferaft painter line shackled to weak-link and around strong white rope.

If the ship sinks, the water pressure will, within 4 meters, activate the sharp knife which cuts the strong rope and the liferaft will float free.

As the ship sinks, the liferaft painterline will be stretched and the liferaft starts to inflate.

Red weaklink breaks and survivors can board the inflated liferaft.
